Subject: **OmniGuide C-LAS Gen 1 Laser System – End of Life Notice**

We thank you for being a loyal customer of OmniGuide Surgical. Our patient safety focused CO2 laser energy continues to be the solution of choice for the precision surgery in difficult to reach anatomy.

As part of our product lifecycle management process, we have identified that our **C-LAS Gen 1 (FELS-25A-Gen1) Laser System** will be transitioned to an “End-of-Life” status as of **November 29, 2018**. This decision was based on our review of **C-LAS Gen 1 Laser System** unit shipment volume relative to the product demand and adoption rates of the newer **IntelliGuide Laser System (FELS-25A)** platform.

Though the date is more than a year away, we feel that informing our **C-LAS Gen 1 Laser System** customers now is the right decision as it provides ample time for OmniGuide and our **C-LAS Gen 1 Laser System** customers to work together to transition to newer laser generator offerings without disrupting your daily operations. Moreover, please consider this notification as an opportunity to explore the technological improvements to our laser generator offerings which will assuredly benefit your physicians, hospital staff and patients alike.

Please note that no new orders for the **C-LAS Gen 1 Laser System** will be accepted, commencing with the **date of this notice**. However, we do plan to continue to support existing customers with said units until the **End-of-Life date** identified herein.

Your local OmniGuide Area Sales Manager can be contacted to ensure that your hospital and facility experiences a seamless transition to OmniGuide’s most current laser generator offerings.
